The only thing that differs in attaching Velcro Connectors is making sure you place them so that the Velcro meets. They will still get attached in the very same places as the Zipper Connectors did.

Here's a little reminder of how we placed our Zippered Connectors.

We'll place our Velcro Insert Connectors in the exact same spot BUT we made sure to place them so that the Velcro pieces would meet and attach when the Inserts are combined. Turn to the next page and you'll see what I mean. :)

And here it is. Easy as pie. Our 1st Velcro Insert Connector is stitched in place! You can see from these photos how the Velcro engages and keeps the modules connected. Now you can continue on, and attach your remaining Velcro Connectors in the spots as the Zipper Connectors would have been attached (just be mindful of the fact that your Velcro must be able to meet in order to engage. :)
