For step 66—Attaching 1st Connector

Place insert connectors HERE

Place insert connectors HERE

The only thing that's tricky about attaching your Insert Connectors, is placing them in the right places. I always start by placing my completed modules in their final arrangement,

I'm going to place connect these two insert modules together first. Here they are, pinned in place ready to be stitched.

*Please note— that even though I have pinned my Insert Connector to the Elastic Pocket side of my module, I am actually stitching it in place from the Expander side, (just like we did in step 58).

Remember, it's always easier stitching from the Expander side .

And here it is. Easy as pie. Our 1st Insert Connector is stitched in place!
