Puff Pocket

In this shot, we've placed out Puff Pocket LSD on a Plank (#3) in lining.

and when we align our side and top edges and the single notch on the bottom edge, it becomes apparent that there's a little excess fabric along the bottom of our Puff Pocket.

So, just push this excess out toward the side edge of the pocket to form a tuck, bending it toward the edge and pinning it in place.

Here's the way our completed Puff Pocket looks. These tucks will provide just enough extended storage for some of your bulkier items that might call for the additional security of a zippered closure.   :)
