Packlets-
Adding a Tab to a closed bottom zipper - Step 16

Using a zipper that's closed on one end & open on the other (as opposed two a two-headed purse zipper), is a tad more complicated. In this case, push the two open zipper ends together aligning teeth edges, then pin the Tab ends in place over the zipper teeth while maintaining this positioning. Carefully pin in place then stitch as directed while monitoring underlying Panels to prevent slippage or overlapping of the zipper ends.
