

## Sling Along- Securing Side edge of Zipper- Step 20

In picture 1, you can see that I'm stitching the wall in place so its raw edge is even with the tail end of the zipper.

Notice that because the Wall is actually wider than the zipper, that this stitching will actually cause the Wall to "gap-open" a bit, and that's a GOOD thing.

Picture 2 is a better view of this area once the stitching is done.
