

GateWay- Attaching Your Purse Zipper, Part 1 - Steps 5-8 , page 1 of 2

5- Mark center of zipper (on RS and WS of zip). Retrieve Bag Front from step 3. Open zipper & place it RST along top edge of Bag Front aligning zipper mark w/center single notch. Unzip & pin zipper in place RSD on top edge then stitch in place a scant 1/4" from raw edges from covered zip end to covered zip end.

Please note how many pins I use. Best results happen with the use of LOTS of pins!

6- Press a 1/4" hem (WST) along bottom edge of a Zip Pouch in lining (from side double notch to side double notch). Now align RS of Zip Pouch to WS of zipper matching center single notch to zipper mark & sandwiching LS of Wall & Zip Pouch exterior in between layers. Pin in place from side double notch to side double notch. Stitch a FULL 1/4" from edges in this area only, leaving bottom area open & unstitched. DO NOT trim seams or clip curves. Flip Zip Pouch lining over zipper so Bag Front is RSO now.

7a- Pin bottom "pressed-under" edge of Zip Pouch lining in place along bottom curved raw edge of Wall in lining.

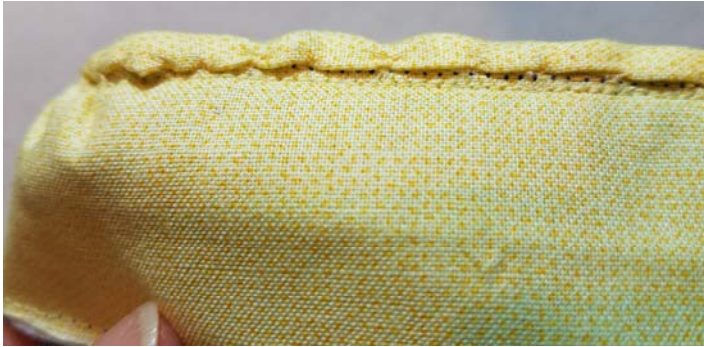

Three examples are provided for you because as you can see, this doesn't have to be fancy or particularly accurate. All that's required is that the actual raw edges be contained.

GateWay- Attaching Your Purse Zipper, Part 1 - Steps 5-8 , page 2 of 2

7b) Handstitch in place referring to tip below.

Stitching Tip: Your goal here is to simply conceal the raw edges of the bottom seam w/ Wall, NOT the actual step 3 stitching. This stitching need not be pretty or particularly accurate as it'll be "buried" deep WITHIN the seam, inside your Zip Pouch.

8) Zip both zipperheads to a closed position at top of Zip Pouch. Align free zippertape edge with free Wall edge. Pin in place then stitch close to edges from bottom of Zip to top of Wall. (This will cause Wall to "pouch-out" from zipper a bit & this is desired.)

Two pictures are provided here so you can see how it looks from the outside and from the inside! :)
