Various ways to use your Cargo Strap & the hardware you can use.

Your phone can be connected with a Tether Tab to the Cargo Strap as long as you have a “full coverage phone case” (at left above). It will not hold your phone reliably in a “non-full coverage phone case” (at right).

Here (at left)is how to place your Tether Tab.

If you do NOT want to “tether” your phone to your Cargo Strap, or if you’ll be carrying it inside the Mega Pouch, then you can either connect the Strap ends together by connecting just the snaphooks, OR, you can finish the connection with a gate ring. Your choice.

But if you DO want to “tether” your phone to the Cargo Strap, you’ll need another hook to do so (*because the big snaphooks on the Straps are too wide to be used with that tiny tether Tab D-ring.)* We recommend hooking the Strap snap hooks to a “lever-style” snap hook, then hook that to the Dring on the Tether Tab.
