the Cargo Strap
Steps 24a+24b– Preparing Pouch Floors

24a) Reach under zippertape & carefully pull zipper pull out as far aspossible over the bias taped side edge. Place pins in zippertapes to hold this placement (*over the "penciled" center line*).

24a cont.) For the cut zipper end (*from step 21*), pinch zipper teeth together (*without overlapping them*), as far out over bias taped edge as possible, then pin to secure placement.

24b) Using a zipper foot, stitch across zipper teeth as close as possible to zipper pull (*or for the cut zipper end... stitch where zipper starts curving outward*). Reinforce this stitching & trim away zipper ends ~1" below this stitching.

(*This stitching does **NOT** need to extend all the way out to side edges of zipper. It only needs to extend ~1/4" on either side of the zipper teeth.*)

(ALSO **Please note**: this stitching **will** be visible on the underside of each Pouch exterior.)
